Posts Tagged 'woman' The more that I learn about the factors behind fertility and infertility in women I have the more sure I am that the commercial pregnancy test is a faulty lead. These tests are a reflection of the market, and not the market for women who have a history of infertility. I am searching for the really effective test for infertility in women, and my research is telling me to look carefully at the source. The widely used, highly advertised kit known as the Clearblue Test is not an effective test for infertility. In one study, a 70% accurate test was produced using the Clearblue kit, however the accuracy for Clearblue testers dropped to 40% when comparing the positive results of Clearblue kits to those on more accurate tests. If an actual infertility test were to find similar results to the Clearblue Test, then the market of infertility tests would be in trouble as they would not be producing the most accurate test. For a tool to be effective in the market of personal relations, it has to be tailored towards that particular market of people in order to be useful. A pregnancy test for women, a pretty common and nearly universal household object, has to be able to distinguish between the fertile and infertile, and must also be able to distinguish if you are ovulating or not. None of that comes across when one looks at the process. The really effective fertility test for women cannot be the Clearblue kit because it does not accurately distinguish between fertile and infertile women. It could be that the real Clearblue kit is even more inaccurate in this regard than the above study. This leads to the commercial Clearblue kit being a bit of a dead end. You're attracted to this one, and a little bit off-put by that one. Maybe even a little bit obsessed. And that's OK. In fact, you're probably used to it
