Review Assistant is a useful Visual Studio add-in that aims to streamline the coding and debugging processes by offering sleek tools for adding review comments directly within the code editor itself. Useful Visual Studio add-in Evidently, Review Assistant requires that you firstly install pre-requisites like .NET Framework 4 or higher. It is worth mentioning that Review Assistant can be installed on your system without Vistual Studio (more information is available on the app's website). This is also a good time to point out that the add-in comes with full support for TFS, Subversion, Git, Mercurial and Perforce. One of the main advantages of this piece of software is the fact that it enables multiple developers to work on the same sequence of code concurrently. Used to make sure that Visual Studio unhandled exceptions get handled correctly. Add-in: CodeMacro - Overview Created by: Ronan the Fox (thefacebook) Here is the issue for the CodeMacro Add-in. I'd recommend checking this. (Thanks for the update - in my opinion the user who posted this was really spamming the site and just trying to bring his project down.) As soon as you select this option, the code will be added to the clipboard and you will be able to paste it into your workspace. The default behavior is that it will add code after every line. However, if you select a single line, it will add code before and after that line. If you select all lines, it will add code before and after all lines in the selected code. The default behavior is to add an if block. Use "None" to keep the selected lines as is. Paste Full Comments as "CodeMacro" - Added via Extensions - Extension Manager I'm trying to use the IntelliSense snippets in Visual Studio, and it seems the snippet settings from VS2008 are not being applied. The snippets that I add to VS2010 all show up as Comments, yet the snippets show up as Actions when used. I want to use the snippets like Snippet Editor, but show them as Actions when I use them. How to do that? (This was asked in Nov. 2010, but nobody answered) Firstly, you must have the snippet manager add-in. Secondly, you need to be able to edit your SnippetLibrary file to the new place. I can't find any documentation for this, but I suspect you can find the SnippetLibrary file at C:\Users\YourName\AppData\Local\Microsoft\VisualStudio\10.0\Snippets. The file is of the name of your user, probably to do with your user ID. The file will be .snippets for VS2005, VS2008 and VS2010. You need to replace the lines However, I have to add something to it to get the IntelliSense working. Update: I've tried to edit SnippetLibrary but I get errors. (I have this on a machine, not my personal machine) What's wrong with the above? It seems that I can't edit SnippetLibrary file. 1d6a3396d6

Both the iPhone 5S 32GB and 64GB models are available in Silver and Space Grey.
